

FAQs on #COVID – 19

by Dr. Naresh Trehan

Can the new coronavirus be transmitted through mosquito bites?

NO. The new coronavirus is a respiratory virus which spreads primarily through droplets generated when an infected person coughs or sneezes, or through droplets of saliva or discharge from the nose. To protect yourself, clean your hands frequently with an alcohol-based hand rub or wash them with soap and water. Also, avoid close contact with anyone who is coughing and sneezing.
